

# School Data Challenge

The world is in a climate crisis

# Did you know...

01

The main polluter of our planet is cars

02

1 in 4 cars on the road in the morning  
are on the school run

# TRANSPORT CO2 EMISSIONS IN THE EU

## Emissions breakdown by transport mode (2016)

Source: European Environment Agency

# Whoa!

Do you think this is a problem?

What do you feel about this?

These "facts" are  
actually "data"

# Our data challenge

Find out how eco-friendly our school is

# To do this we will:

1. Collect some data from our class (data collection)
2. Make some summaries of our data (data analysis)
3. Tell a story with our data (data visualisation)
4. Tell others about our results (data reporting)

01

# Data Collection

# How did your class get to school today?

Car

Bus

Walk

Cycle

Train

Other

Student1

Student4

Student3

Total

# How did your class get to school today?

	Car	Bus	Walk	Cycle	Train	Other
Student1	✓					
Student4		✓				
Student3				✓		
Total	1	1	0	1	0	0

02

# Data Analysis

What does your  
data tell you?

## Cars

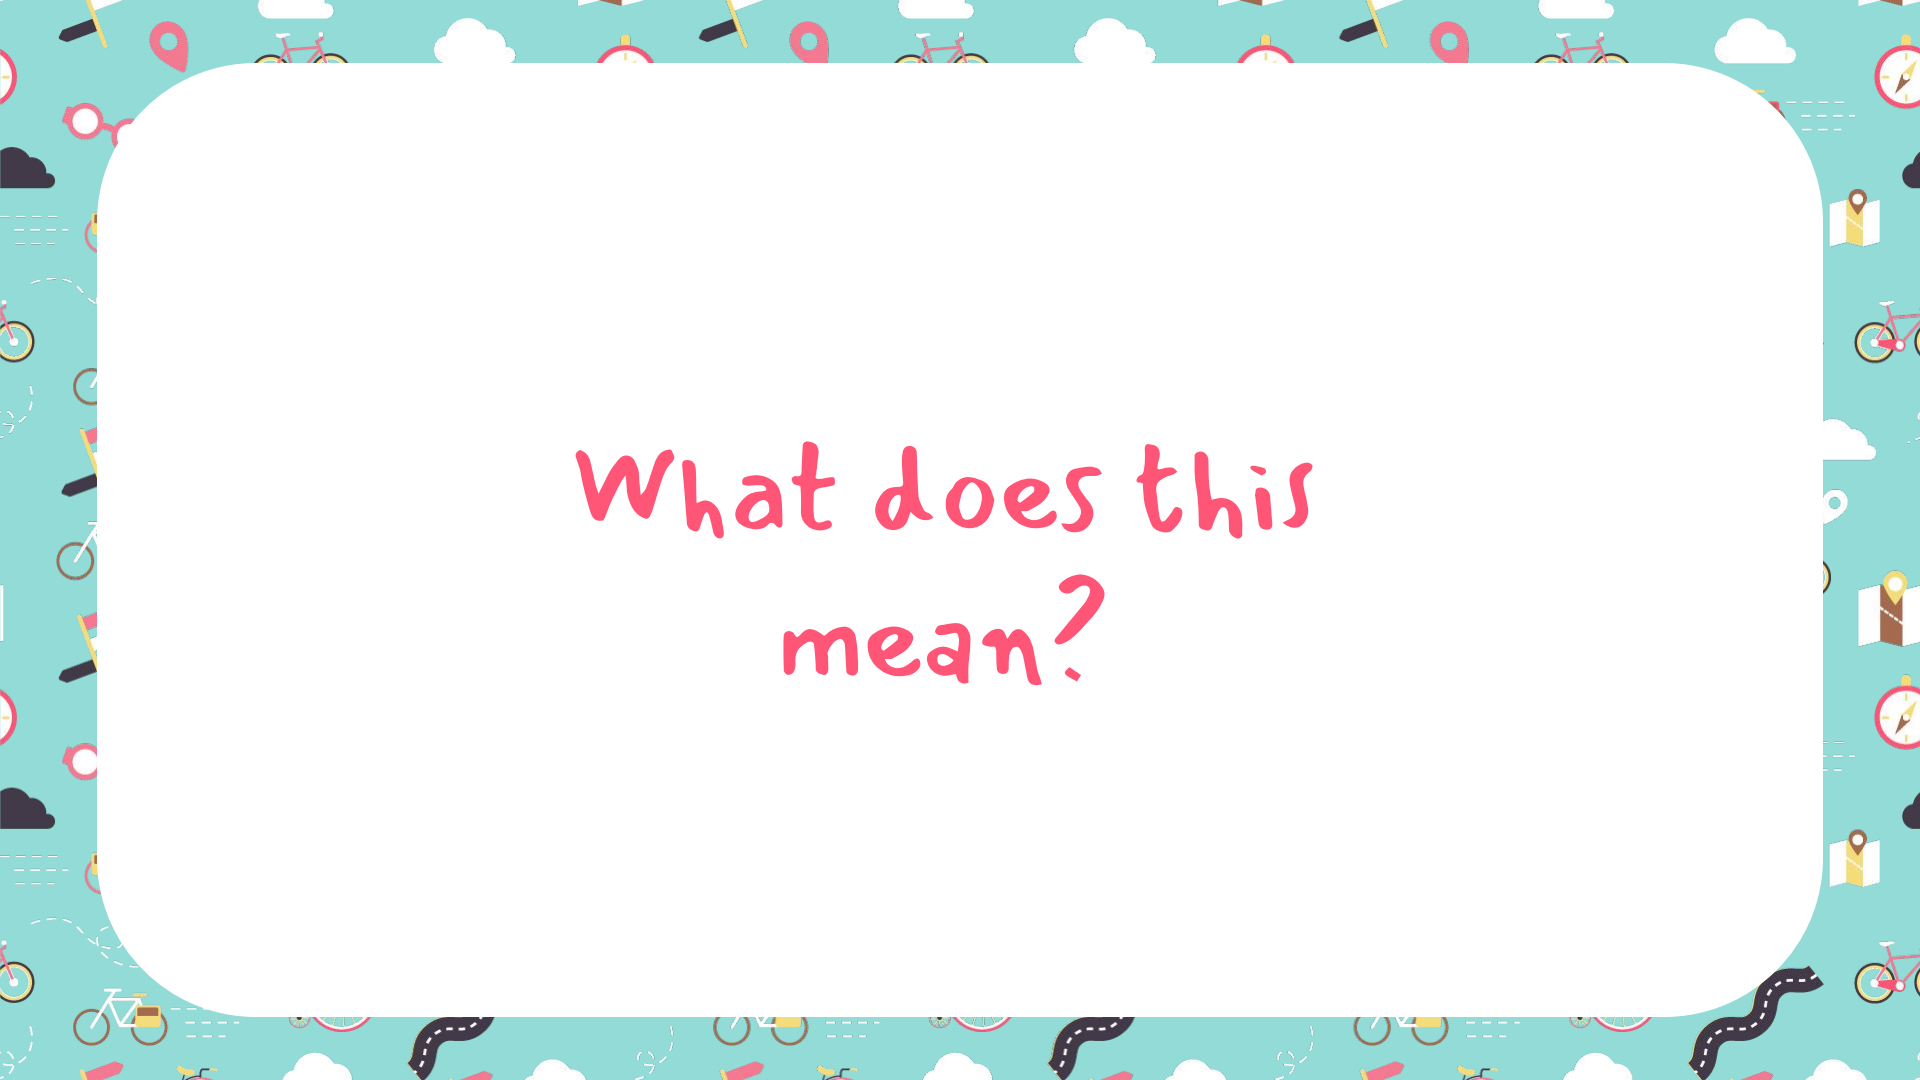

How many students come by  
car?

## Active

How many travel by bike  
or walking?

## Public Transport

How many use the bus or  
train?

What does this  
mean?

03

# Data Visualisation

# Data is not just "maths"

Data is about information

Data is about making decisions

Data is about storytelling

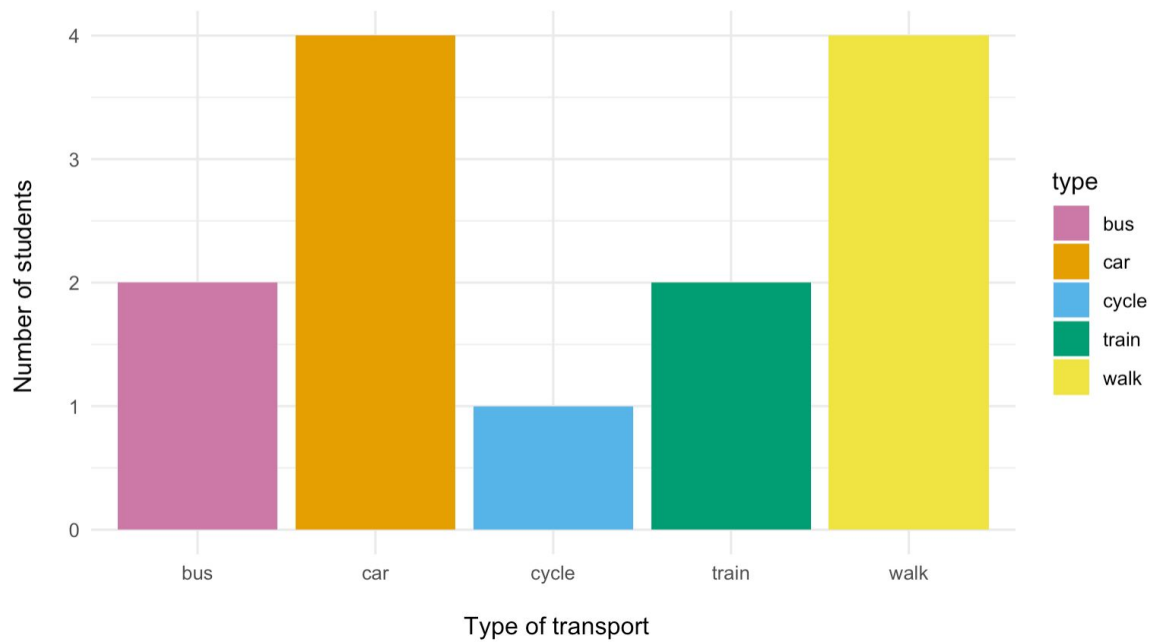

Stories need pictures  
So does data

# Use a Graph to Show Your Data

How students in the class get to school

Can you think of more  
ways to plot your data?

# Create your plot!

Pick your favourite idea and plot your data.

You don't need to be good at drawing – it just  
needs to show the data

04

# Data Reporting

Stories need heard  
So does data

Now you need to think of  
your story to tell

# Stories need:

1. A beginning (what was your data challenge?)
2. A middle (what did you do to collect/analyse the data?)
3. An end (what did you find in your data?)

# Create your data story to tell

Present your data  
report to the class

05

What  
next?

# What have we learned from the data?

1. Does your school have a lot of car use?
2. Do you have lots of people using one particular way of getting to school?
3. Do you think we need more data?

## What have we do based on the data?

1. If your school has lots of car use, how can we use the data to help the school reduce car use?
2. If our data show our school isn't polluted, how can we spread the word and encourage others?

Challenge  
Complete
